

GAMING MOUSE RACCOON

The mouse is equipped with 8 programmable buttons. Located on the side panel, they allow you to freely change the values of the defined parameters. A single button for changing the DPI is placed above the roller. Its position prevents accidental pressing while playing. Large main buttons are comfortable and their use does not cause a feeling of fatigue even after several hours of continuous "clicking". The element for scrolling the screen with a built-in button, the so-called "scroll" can serve as a model for the competition.

Raccoon is a mouse dedicated to recipients looking for a maximum good product in relation to its price. The individual components are well-fitted together, the materials used allow for durable use. We are dealing with a solid mouse with a universal design.

Software and backlighting

Dedicated software does not burden the system and intuitive to use. It allows you to program selected functions for all buttons, including more advanced ones. You will also find options for controlling DPI settings. The application also allows you to define specific colors for selected modes, which greatly simplifies the identification of current resolution settings.

Precision

The well-known and proven Sunplus 1991C optical sensor is characterized by mostly good maximum speeds (about 3m/s) and a pleasant feeling during gameplay.
