

HYBRID KEYBOARD IGUANA HQ

The Iguana semi-mechanical keyboard is distinguished by its model ergonomics. The minimalism of the structure, combined with its simple yet solid appearance, allows the user to focus solely on gameplay. The base of the keyboard is a compact uniform body maintained in a noble variety of matte black. Thanks to the materials used, the stiffened design prevents bending, even with very strong pressure in the central part. The design is complemented by the rounded edges of the device and the honeycomb-colored horizontal stripe that clearly stands out from the upper and lower surfaces of the keyboard.

Striking backlighting

The notification indicators, located above the number section, have been shielded from above with black covers - so they don't shine directly into gamers' eyes, gently illuminating the surface of the keyboard's top cover. The keys in the QWERTY layout have been arranged on a base of durable ABS at distances that prevent errors in non-visual, intuitive button selection. The buttons themselves were made to the standards of the latest "double injection" technology. The individual fonts were applied using laser cutting.

This means that regardless of the intensity of use - the characters cut in this way are indelible. The ergonomics of the keycaps is emphasized by the cylindrical profiling. The backlighting of the keys offers several levels of intensity.

Semi-mechanical system

The semi-mechanical keyboard has separate pressure mechanisms for each key, made of plastic. As a result, the feeling of using such a keyboard, the precision of the keys is very close to a mechanical keyboard. The transmitter of the electrical impulse is the built-in membrane. The pressure force is $55g \pm 5g$. The advantage of such a solution is the precision of operation, with a much lower price, much lower noise.

Multimedia

The keyboard easily allows you to launch multimedia as well as system functions, by selecting FN with the corresponding function keys. The manufacturer has included shortcuts to easily launch the browser, media player, mail, system search engine.

Anti-Ghosting

The Iguana model did not lack 26-button Anti-Ghosting, covering most of the buttons, as well as a Windows button lock. When a keyboard is marketed under the name "Anti-Ghosting," it may simply refer to a specific subset of keys on the keyboard that works well together.

Technical data:

- USB 2.0 interface
- mechanical keys
- 13 special keys
- True RGB backlighting
- 26-button antighosting
- dimensions 480×190×45 mm
- weight 1121g (±10g)
- cable length 1.8 m
- wrist rest
