

OPTOMECHANICAL KEYBOARD GOLIATH BLACK

Ideal for those who expect the highest quality hardware! Meet the first optomechanical keyboard from California Access! The latest technologies and innovative solutions redefine the concept of speed and precision. The Goliath keyboard is the next step in the evolution of keyboards designed for professional gamers! Join the elite group today! LK Orange optomechanical switches guarantee faster response against traditional mechanical switches. This makes the Goliath keyboard one of the fastest in the world!

Optomechanical technology

The operation of optomechanical keys relies on the activation of an infrared sensor. As a result, it does not require the mechanical impact of the key on the metal contact, which oxidizes after years of use and is no longer as precise. The advantage of this solution is that it increases the durability of the switch's operation to more than 100 million hits. This is more than twice as many as mechanical switches! With no need for the flow of an electrical impulse,

the Goliath keyboard gained a new property - water resistance. From now on you don't have to worry that it will stop working after accidental flooding. It is guaranteed to withstand full immersion in water up to 1 meter deep for one minute!

True RGB technology

The Goliath keyboard is equipped with full RGB backlighting, thanks to True RGB technology. The 12 types of backlighting will allow every gamer to choose the best for themselves.

Comfort and practicality

The included wrist pad ensures that you will be comfortable playing on the Goliath keyboard for long hours. Thanks to the built-in magnets, all you need to do to install the pad is bring it close to the keyboard. The magnets will automatically attract it to the case! This is a simple and practical solution! Quick access to the most important multimedia functions is provided by 11 multimedia keys.

Anti-Ghosting and solid workmanship

The keyboard has full Anti-Ghosting and Windows key lock function, which prevents accidental exit from the game to the desktop or launching system shortcuts such as Win + L. The braided cable with a length of 180 cm ensures comfortable connection. The upper part of the keyboard base is made of brushed aluminum, and the lower base is made of durable plastic. Rubber pads provide stability and prevent the device from sliding uncontrollably on the desk.

Technical data:

- USB 2.0 interface
- LK switches
- 12 multimedia keys
- antighosting
- keypress force 50g (±5)
- aluminum housing
- True RGB backlight
- power consumption 5 V - 300 mA
- dimensions 455×221×40 mm
- weight 1240 g (±10g)
- cable length 1.8 m
- wrist rest
- waterproof
