

## SHARK MECHANICAL KEYBOARD

Shark mechanical keyboard is our proposal in the reasonable budget segment. The keyboard's base made of brushed aluminum makes the whole construction look extremely solid. Mechanical switches and True RGB technology backlighting will make it appeal to many gamers!

### True RGB backlighting

Shark looks striking on the desk thanks to True RGB backlighting. The 5-stage adjustment makes it possible for everyone to adjust the optimal level of backlighting to their preferences. In addition, the keyboard is equipped with up to 10 backlighting modes and five levels of illumination speed. The Shark keyboard also has the ability to define the backlighting of selected keys independently and swap the WASD keys with the arrow keys.

### Combine usability with convenience

The Windows key lock prevents unexpected exit to the desktop while gaming. Shark also features two antighosting modes, 6-key and full, aimed at advanced gamers. Convenience and comfort are provided by a palm rest, which can be attached and detached at any time simply and safely. The Shark keyboard also features a single-stage height adjustment.

### Precision and accuracy of workmanship

The keyboard was made with attention to the smallest details. The 180 cm thick cable connecting the device to the computer has been placed in a fabric braid, and 7 rubber pads placed on the bottom of the keyboard prevent the device from moving on the desk, even during the most dynamic games. The font applied to the keys is clear and was applied by laser cutout.

### Full Antighosting

The keyboard features full Antighosting. Practical tests show how useful this feature is in everyday use. Ghosting is the problem of some keyboard keys not working when several keys are pressed simultaneously. Pressed keys that do not appear on the computer or seem to disappear are said to have been 'ghosted'. Our keyboard is equipped with such technological solutions that prevent such problems from occurring.

### Red mechanical switches

Macro and backlighting are not the only indicators of a keyboard's quality. The Grizzly keyboard is equipped with Jixian Red switches, which are equivalent to market-leading gaming switches. The durability and speed of the keys guarantees an edge in gaming.

### Technical data:

- USB 2.0 interface
- mechanical keys
- 10 backlighting modes
- True RGB backlighting
- full antighosting
- dimensions 470×180×38 mm
- weight 1000g (±10g)
- cable length 1.8 m
- wrist rest
