

MEMBRANE KEYBOARD GECCO

The Gecco membrane keyboard is distinguished by its modern, feisty, dynamic design. The compactness of the body, combined with its unfussy, yet solid, stable appearance, allows the user to focus completely on the details of the game turned on.

Ergonomics and comfort

The body of the device, kept in a noble variety of matte black, thanks to the structure used, prevents bending, even with very strong pressure in the central part. The keyboard base is the quintessence of ergonomics in its price range. The built-in wrist rest ensures hassle-free, hours-long entertainment without feeling fatigued. The keyboard remains stable even during heavy use during gameplay.

The design is complemented by symmetrically placed backlighting on the top left and right sides of the device. The easy-to-read notification indicators are located above the number section, and when activated, they light up in blue dots - so they don't merge with the red backlighting of the entire design.

Multimedia

The keyboard easily allows you to launch multimedia as well as system functions, by selecting FN with the corresponding function keys. The manufacturer has placed shortcuts here to easily launch the browser, media player, mail, system search engine.

Backlighting of the keys

The buttons were made according to the standards of the latest "double injection" technology. The individual fonts were applied using laser cutting. This means that regardless of the intensity of use - the characters cut in this way are indelible. The ergonomics of the keycaps is emphasized by the cylindrical profiling. The backlighting of the keys offers several levels of intensity with a pleasant deep red color. At the same time, the thoughtful deep embedding of the keys in the body prevents accidental blinding of the user.

Switches

The keyboard has high-quality dome membranes under each of the keys, above which are keys made of plastic, mounted in well-fitted guides. The pluses of such a solution are the precision of operation unavailable to cheap budget keyboards. The transmitter of the electrical impulse is the built-in membrane. The pressure force is 55g ± 5g. The keyboard works much quieter than a mechanical keyboard.

Technical data:

- USB 2.0 interface
- membrane keyboard
- 10 special keys
- 25-button antighosting
- red backlight
- dimensions 478×213×38 mm
- weight 900g (±10g)
- cable length 1.8m
